Key Trends

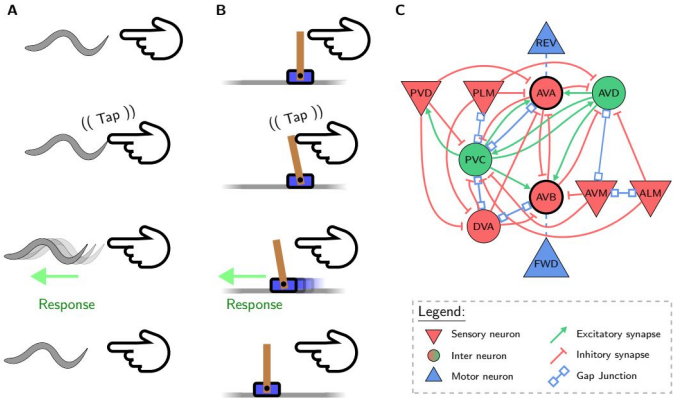

Figure 1: Illustration of the touch withdrawal reflex. **A**) Touching the worm's tail will excite the touch sensory neuron PLM, and correspondingly induces a forward locomotion command in the animal [1] (Hand is not drawn to scale!). **B**) Working principle of the introduced touch withdrawal inverted-pendulum controller. **C**) Tap Withdrawal neural circuit of *C. elegans*.

CAN: Creative Adversarial Networks

CAN은 독특하면서도 엄청 이상하지 않은 범위내의 작품을 생성한다. 너무 적은 자극은 심심하고 너무 큰 자극은 혐오감을 불러일으킨다 (Colin Martindale의 심리 이론).

CAN 구조

Discriminator가 각 이미지가 진짜 이미지인지 가짜 이미지인지 판별. 또한 이미지를 25개의 예술적인 스타일(큐비즘, 추상, 르네상스, 등등)을 분류.

Generator는 Discriminator를 만들어진 이미지가 진짜라고 속이도록 생성한다. 또한 Discriminator가 스타일 분류하기 어렵게 만듬.

Abstract Expressionism (추상 표현주의)

"일반적으로 1940년대와 1950년대 미국 화단을 지배하던, 미국 회화사상 가장 중요하고 영향력 있는 회화의 한 양식을 가리킨다. 추상표현주의는 서구 근대 미술의 복합적인 요소를 모두 포함하고 있다. 야수주의, 표현주의, 다다, 미래주의, 초현실주의로 이어지는 한 계보와 인상주의, 입체주의, 기하학적 추상의 계보를 모두 받아들이고 있다."

실험 4 - ambiguity loss가 도움이 되나?

Q1: 어떤 작품이 더 독창적인가?

Q2: 어떤 작품이 미적으로 더 뛰어난가?

결과: 설문자의 59.47%가 CAN으로 만들어진 작품이 더 독창적이고 60%가 미적으로 더 뛰어나다고 답변하였음.

실험 1 (Turing Test)와 실험 3 (예술이 될수 있나?)에서 높이 평가된 CAN 작품들

Colton, Creativity versus the perception of creativity in Computational Systems, 2008

어떠한 시스템이 창조적인 특성들을 갖기 위해서 3가지가 필요하다: 새로운 것을 만들어내는 능력 (상상력), 완성도가 높은것을 만들어내는 능력 (기술력), 자신이 만든것을 평가하는 능력.

CAN은 이 3가지를 다 충족. 심지어 실제 작가들보다 더 높은 평점을 받았음.

그러나 작품에서 의미적인 이해는 갖고 있지 않음. 스타일과 예술의 겉부분을 바탕으로 학습.

사람들이 미적인 평가에 편향되었는가? 만약 그러면 결과는 창의적이지 않은가?

ASCII Art

"아스키코드 0x20~0x7e에 포함되는 문자, 기호를 사용한 그림을 말한다. **텍스트 아트**, **문자그림**으로도 불린다... *아스키 아트는 주로 이모티콘으로 쓰이지만, 여러 줄에 걸쳐 기호를 배열해 풍경사진·사실화 등을 모방할 수도 있다.*" -wikipedia

사실 이 논문은 아스키코드가 아닌 일본어도 사용. 그래서 원래는 아스키 아트가 아닌 텍스트 아트.

Improvised Comedy (즉흥 코미디)

배우들이 대사와 계획 없이
즉흥적으로 진행하는 코미디.

고도의 집중력, 상황판단, 동작,
관찰, 상대방의 액션에 대한
재빠른 리액션, 팀웍, 팀빌딩,
커뮤니케이션, 콜라보레이션
등등을 요구함.

Piotr Mirowski(좌): Deepmind 연구자. London, UK에서 거주.

Kory Mathewson(우): University of Alberta 박사과정. Edmonton, Canada에 거주.

SNS로 서로 알게되어서 시차 7시간 차이 나지만 2016년부터 같이 활동을 시작함. 둘 다 강화학습 연구자.

Language as sequences
"How did you come up with A.L.Ex?"

- Personal experience: learning English as a foreign language.
  Learn from **patterns of words** rather than from grammatical rules.
- **Statistical language models**:
  Learn to compute likelihood of a sentence, based on data.
- Improvised musical (Showstoppers, The Maydays):
  rhymes will come **naturally**… with some practice.

Reviews

“Meet the smart robots with artificial irreverence. Stage debut beckons for machines programmed to learn the nuances of improvised comedy…” – The Times

Albert and A.L.Ex have been selected as “Comedians to Watch in 2017” – The Phoenix Remix.

“… an immensely enjoyable trip to the future […] with Dr Piotr Mirowski doing live improv comedy with his AI system A.L.Ex. (with hilariously ominous consequences!)…” – Jugular.

Kory Mathewson has been selected to the “Top 40 Under 40” for 2016 by Avenue Edmonton: “… shared his extensive knowledge of improvisation and artificial intelligence not just in his own community, but on a global scale”.

Kory was selected as Best in the Fest at the 2015 Vancouver International Improv Festival for TEDxRFT, which also won the Insane Concept of the Year award from 12th night.

“…the implausible comic energy that Kory Mathewson and Donovan Workun bring to their Back To The Future double-act whenever they hit the stage.” – Edie Ranvier, Improvathon 2016: The Lost Theatre, London

Neural Translation of Musical Style

원래 악보에 인공지능만의 표현력을 넣어서 사람의 연주와 구별할수 없는 음악 연주를 생성하는 방법을 배울수 있을까?

음악에 의해 주입된 스타일의 상당 부분이 역동적인 면에서 오는것이라고 가정.

시간이 지남에 따라 음표 속도를 주입하는 방법을 배움.

Learning to Create Piano Performances

피아노 연주 생성을 학습:

음표 예측과 타이밍과 음악의 역동성 안에 있는 표현적인 다양함을 예측.

연주자(피아니스트, 교사)와 작곡가(영화, 클레식, 교수등등)들의 반응

“Fantastic!!!! This [. . .] absolutely blows the stuff I’ve heard online out of the solar system. . . . The melodic sense is still foggy . . . but it’s staggering that it makes nice pauses with some arcing chord progressions [. . .] its not far from actually coming up with a worthwhile melody . . .”

“. . .sounds like you fed a bunch of Mozart, Beethoven, Schubert, and Chopin into the system ”

“. . .a very drunken Chopin, messing around a bit with psychedelics . . .something a Russian composer would’ve written under the influence of Impressionism. . . . ”

“. . . Not liking the somewhat messy run but [. . .] it seems wrong in a human way. ”

“. . . I wanted to hear more, as in longer sections, to hear how the piece would unfold from there.”

Learning to Create Piano Performances

사람이 연주처럼 들림.

생성된 샘플들은 피아노 레퍼토리를 연상케했음.

대부분의 샘플들은 스타일들은 일관되지 않았음.

흥미롭게도 일반적으로 시스템에 깊은 인상을 받은 여러 작곡가들은 멜로디에 특별히 인상받지 않았다고 함.

Machine Learning for Creativity and Design (NIPS 2017 Workshop) Review

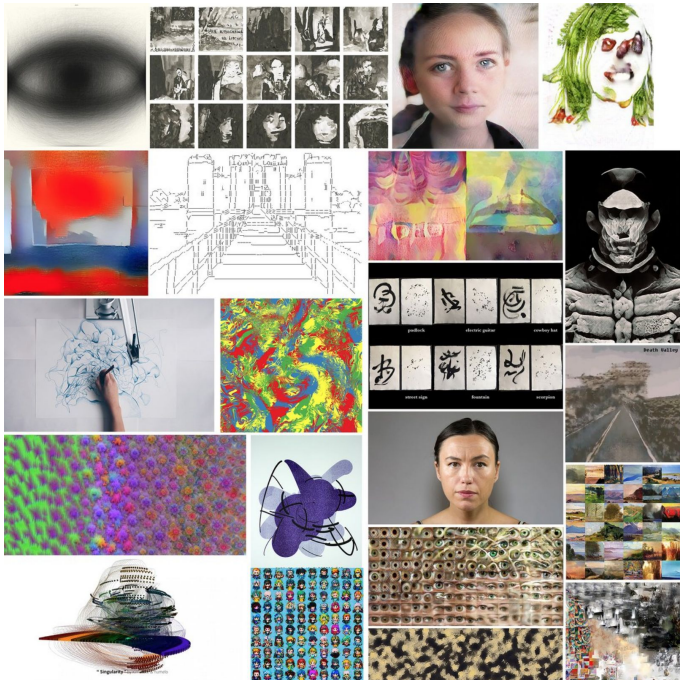
미술, 음악/음성, 스토리텔링, 증강현실 등등의 다양한 분야.

시각, 청각이 많지만 후각, 촉각, 미각등도 충분히 가능성이 있음.

Magenta와 같은 지금 당장 오픈소스 프로젝트들도 많음.

인공지능으로 많은것들을 할수 있는것도 좋지만 인공지능 윤리에 대해서 계속 토론되어야함.



들어주셔서 감사합니다!
